

# Live Audio-Visual Feed of Surgeries

We have developed a platform and operating procedure for the Live Audio-Visual Feed (LAVF) of the surgeries for the training of medical residents. Five LAVF regional centers shall be established across America. This service shall only be available to the medical centers rendering training of the medical residents. A registration and contract are required between TelemedEdu, Inc., USA and the medical institution.

## Technical Details:

**Live streaming** refers to online streaming media simultaneously recorded and broadcast in real time.

Surgeon wears a camera with the head band and explains the procedure while the audio and video are streamed to users in the live session and also records for future reference. The audience can post their questions and the moderator finds the right time to let the surgeon answer during or post-surgery.
